

2. (Amended) The color hologram display according to
claim 1, wherein said color pattern of plane characters or images
is reconstructably recorded in monochrome.

Contd 3. (Amended) The color hologram display according to
claim 2, wherein said color pattern of plane characters or images
is reconstructably recorded in green.

B1 4. (Amended) The color hologram display according to any
one of claims 1 to 3, wherein a plane shadow of said color
pattern of plane characters or images is reconstructably recorded
on a surface different from a surface of said color pattern.

S1 6. (Amended) The color hologram display according to
claim 4, wherein said shadow is reconstructably recorded in front
of said color pattern.

B2 7. (Amended) The color hologram display according to any
one of claims 1 to 3, wherein any shadow of said color pattern
of plane characters or images is unrecorded.

Sub 8. (Amended) A process of fabricating a color hologram
display, wherein a color three-dimensional subject image and a
color pattern of plane characters or images are recorded as
hologram images in the same photosensitive material.

C3 9. (Twice Amended) A process of fabricating a color
hologram display according to claim 8, wherein a subject
hologram plate for forming a color three-dimensional subject

image and a character hologram plate for reconstructing the color pattern of plane characters or images are separately made, said subject hologram plate and said character hologram plate are spatially positioned with a given space located therebetween, and diffracted light from said subject hologram plate and said character hologram plate is simultaneously entered in the same photosensitive material to record said subject and character hologram plates as hologram images.

10. (Amended) The color hologram display fabrication process according to claim 9, wherein an area of said hologram photosensitive material other than a portion thereof corresponding to said color pattern of plane characters or images is deactivated by photosensitization, and a reflection type hologram of a scatter plate is then recorded in said portion of said hologram photosensitive material to make said hologram plate.

B3

13. (Twice Amended) The color hologram display fabrication process according to claim 8, wherein said character hologram plate for reconstructing said color pattern of plane characters or images is made, said character hologram plate is located in front of a color three-dimensional subject, and diffracted light from said character hologram plate and scattered light from said color three-dimensional subject are simultaneously entered in the same photosensitive material to record said hologram plates as hologram images.

14. (Amended) A process of fabricating a color hologram display as recited in claim 7, wherein a subject hologram plate for forming a color three-dimensional subject image and a character hologram plate for reconstructing a color pattern image of plane characters or images are separately made, said subject hologram plate and said character hologram plate are superposed one upon another, and diffracted light from said subject hologram plate and said character hologram plate is simultaneously entered in the same photosensitive material to record said color three-dimensional subject image and said color pattern image of plane characters or images as hologram images.

b3

15. (Amended) A subject hologram plate used to fabricate a color hologram display, wherein a subject hologram plate for forming a color three-dimensional subject image and a character hologram plate for reconstructing a color pattern image of plane characters or images are separately made, said subject hologram plate and said character hologram plate are positioned with a given space located therebetween, and diffracted light from said subject hologram plate and said character hologram plate is simultaneously entered in the same photosensitive material to record said color three-dimensional subject image and said color pattern image of plane characters or images as hologram images.

16. (Amended) A subject hologram plate used to fabricate a color hologram display wherein a subject hologram plate for forming a color three-dimensional subject image and a character

hologram plate for reconstructing a color pattern image of plane characters or images are separately made, said subject hologram plate and said character hologram plate are superposed one upon another, and diffracted light from said subject hologram plate and said character hologram plate is simultaneously entered in the same photosensitive material to record said color three-dimensional subject image and said color pattern image of plane characters or images as hologram images.

b3

17. (Amended) A color hologram display according to one of claims 1 to 3, wherein a shadow of said color pattern of plane characters or images is reconstructably recorded on the surface of a color three-dimensional subject image.

b4

[Please add new claim 18 as follows:]

18. The color hologram display according to claim 5, wherein said shadow is reconstructably recorded in front of said color pattern.

REMARKS

Reconsideration is respectfully requested.

Claims 1-17 are pending in this application of which 1-4, 6-10 and 13-17 have been amended. New claim 18 has been added.

In the Office Action dated July 27, 2001, the Examiner objects to claim 6 as being a multiple dependent claim depending on another multiple dependent claim. This claim has been amended
